

# 2024-02-29 On Premise Environment Preparation

- Production URL:
  - <https://app.e-stmt.com/>
- UAT URL:
  - <https://uat.app.e-stmt.com/>
- For each environment, the following services will be running within Docker:
  - Core Services
    - Traefik
    - RabbitMQ
    - MariaDB
    - MinIO
    - Log Viewer
    - DB Viewer
    - Portainer
  - Application Services
    - GrabBill On-Premise (OP) UI
    - GrabBill OP API
    - GrabBill OP Engine
- For each environment, we will need the following subdomains (e.g. app.e-stmt.com, etc):
  - app.xxx
  - api.xxx
  - traefik.xxx
  - logs.xxx
  - db.xxx
  - minio.xxx
  - queue.xxx
  - portainer.xxx
- IP addresses for Windows server for production & UAT.
  - Admin user access required.
  - Make sure the Windows server is properly patched and updated.
- Windows Server ports required to be open to external access:
  - RDP (3389)
  - SSH (22)
  - Docker (2375, 2376)
  - MariaDB (3306)
  - HTTP/HTTPS (80, 443)
- Do not recommend sharing OS for both production & UAT as it complicates environment setup & maintenance.

- Note: Windows server configuration, maintenance, patching and server/data backups are not within our scope. So, ensure that proper process on these are performed.
